by A. Londero 2013 Cited by 86 We present a freely available Java tool that can be used to rapidly calculate and visualize the karyotype of a DNA sequence . Cited by 1664 BKIT Cytogenetics may provide a solution for many applications by J Weiss 2011 Cited by 636 Automated karyotyping by E Parra-Dionisio 2015 Cited by 8 The following open source software can be used for automated karyotyping of metaphase chromosomes: ratiometrics, ideo, and ideokar . by M Popescu 2006 Cited by 393 The karyotyping module of the EBtools package provides a software tool to perform automated . by B Ehret 2011 Cited by 189 The following software provides further tools to automate karyotyping of chromosomes with or without banding . by G Mirzaghaderi 2018 Cited by 23 Automated by R Fauchier 2013 Cited by 1 Cited by 3 Automated by M Popescu 2006 Cited by 33 Software applications for automated chromosome karyotyping are reviewed. Two approaches, semiautomated and fully automated, are used to classify the karyotyping software based on experimental design, karyotype analysis results, and characteristics of the software . by G Mirzaghaderi 2018 Cited by 58 A comprehensive review of published comparative chromosome analysis software is presented and a brief description of five freely available software solutions is presented. The software implementation is presented in three sequential sections; karyotype generation, karyotype evaluation, and postprocessing . by G Mirzaghaderi 2016 Cited by 1 The software Cyclebench is a freely available for use in karyotype analysis. It was developed to allow the annotation and integration of image-based chromosome data into a G-banded karyotype while maintaining the integrity of the metaphase image and the subsequent karyotype in the human, bird, and fish genomes. by N Auer 2012 Cited by 5 A comparison of three automated karyotyping techniques using human chromosome 21 as model for metaphase chromosome analysis is presented. by K Cukierman 2011 C
