fields over $GF(2)$ Could someone please give a proof of the following fact? If $GF(2^n) = GF(2)[x]/P(x)$ then $$P(x) \in \mathbb{Z}[x] \implies P(x) \equiv 0 \mod 2$$ It is easy to see that the converse is true. In particular, it follows from the fact that the only irreducible polynomial of degree $\leq n$ over $GF(2)$ is $x^n - x^{n - 1} - \cdots - x - 1$. I would appreciate it if someone could give a proof or a reference. Thanks! A: As Hagen von

Eitzen says in the comments, the degree of a polynomial over $\mathbb{F}_2$ is at most $\log_2(n)$. But there is a more general result that says the degree of a polynomial over $\math
