This is the structure I have so far. Uncaught SyntaxError But I want the content to get a class of a-hidden if the URL does not contain?redirect=true. I can write a condition for that in javascript. But I am looking for a better way as the structure can be changed in the future. In other words, I want to hide the #content div if there is no?redirect=true. Is there any way to do this? I've tried using $("#content").toggleClass("a-hidden");, but I think that is not the right way to do it. A: If you just want to hide the div, and not the contents in it, just put an empty div in it. Then style the div with the hidden class, but don't display it. Content CSS .content-container { display: none; } .content-inner-container { display: block; } If you actually want to add an a-hidden class to the div that contains the content, make sure to give it a unique id or class, and you can use document.getElementById('myId').className += " hidden" (or 2d92ce491b
