The cracked files are detected by the virus-scanning software and the bundle file will be automatically removed. Then, you will be prompted to finish the installation of the software on the computer. Development In 1991, four French graduates, André Rohan, François Lambert, Alain Durocher and Frédéric Boulanger, founded Chopard, a technology company involved in the development and manufacturing of hardware, software and services for the timekeepers, jewelry and sports industries. A first success was the development of a new method to manufacture bearings by casting. This revolutionized the traditional manufacture of bearings on a spinning-steel drum and, over time, the company has become one of the leaders in the field of production of rotating components. . In 1999, Chopard acquired GEO-SLOPE, a company devoted to the software creation of land and geological surveys. The acquisition enabled the company to offer Geostudio. GeoStudio is a full software capable of working in all the geological and geomorphological domains, but designed particularly for the field of stratigraphy and geography. . In 2008, Chopard sold GeoStudio to GEOSLOPE, a company devoted to the same kind of research. The success of GeoStudio in the field of stratigraphy and geography compelled GEOSLOPE to buy other companies: the company AcuGeo and the company GeoCad were created. In 2012, the company GEOSLOPE obtained the company Microdots (software for the creation of geological maps). The same year GeoStudio was absorbed into the other companies. In 2014, GeoStudio was proposed by GEO-SLOPE to the Geological Society of the United Kingdom (GSUK). This is followed by the formation of GEOSLOPE Geostudio.
