```
A: Try something like this String[] all_keys = data.split(":"); String key = all_keys[0]; String value = all_keys[1]; if
(data.startsWith("LED:")) { Log.d(TAG, "Got text: " + key + " : " + value); } If you want to loop over all keys you will have to
modify it. package main import ( "fmt" "os" "regexp" "strings" "time" ) func isMagic(line string) bool { re :=
regexp.MustCompile("[0-9]*(\\d+):(\\d+)") result, err := re.MatchString(line) if err!= nil { return false } if
result.Groups[1].Success && result.Groups[2].Success { return true } return false } func isEffMagic(line string) bool { re :=
regexp.MustCompile("[\\d+\\j\\s*ERR\\s*(\\d+)") result, err := re.MatchString(line) if err!= nil { return false } if
result.Groups[1].Success && result.Groups[2].Success { return true } return false } func isEffInt(line string) bool { re :=
regexp.MustCompile("[0-9]*(\\d+):(\\d+)") result, err := re.MatchString(line) if err!= nil { return false } if
result.Groups[1].Success && result.Groups[2].Success { return true } return false } func main() { _, err := os.Stat("out/test.csv") if
err!= nil { fmt.Println("

with good antivirus software. We will release a new version as soon as possible. All about ledwalker+v1+0+software+free+downloadCorrelations of spontaneous recovery and outcome after severe head injury.

To determine the influence of variables such as initial neurological status, hypoxia, early or late hypotension, and a history of previous head injury on the recovery of mental and motor function after a head injury.

Descriptive, observational, cross-sectional study. Twenty-one

patients with severe head injury at the University of Texas Medical Branch. Assessments of cognitive and motor functions were obtained from the Glasgow Coma Scale, the Abbreviated Mental Test, the Rey's Auditory Verbal Learning Test, the National Institutes of Health Stroke Scale, the Bedside Test of Selected Neuropsychological Domains, the Wide-Range Achievement Test, and the Brainerd Performance Test. Standardized measurements were obtained for age, race, sex, duration of loss of consciousness, Glasgow

Coma Scale score on admission, hypotension on arrival, and presence of a history of previous head injury. The average duration of loss of consciousness was 5.3 hours; the mean age was 26 years; the mean Glasgow Coma Scale score was 9.8; and the mean duration of posttraumatic amnesia was 4.2 days. The Glasgow Outcome Scale scores were good in 13 patients, 2d92ce491b
