
Native Instruments Deep Freq For KORE 2 PC MAC

Instrument In addition to the usual guitar effects pedals like the Boss TU-3 Chromatic Tuner, a stereo multi-effect unit with seven effects loop inputs and outputs, the D-16000 uses a custom synthesizer: the Kore. Kore is an unusual instrument that combines the functionality of a modular synthesizer with the visual characteristics of a chord organ, both with the aid of MIDI. The Kore's chords and arpeggios are generated by the normal mechanisms of a modular synthesizer, and the Kore's oscillators can be split and sent to the any of the effects loops to drive sounds, so the Kore can emulate a large number of different instruments in a relatively compact and convenient package. Due to the high number of options on the Kore, the device is often cited as one of the most complex synthesizers available. The Kore uses three oscillators (O1, O2, and O3), with each producing a sine and triangle signal. The sine waves are a dual oscillator with a rate of 22.054 and 16.208 kHz, and a frequency offset of 0 Hz and O1, while the triangle waves are a single oscillator with a frequency of 0.5 kHz. The triangle waves can be altered in pitch by the pitchbend knob. The Kore also has three modulation sources, two LFOs, and a third

which combines the two. O1's modulation source is a LFO with a rate of 20.049 Hz, which can trigger the filter envelope and a pitchbend function. O2's modulation source is a LFO with a rate of 4.095 Hz, which triggers the modulation on O1 and the envelope on O3. O3's modulation source is a LFO with a rate of 6.047 Hz, which triggers the pitchbend on O1 and the modulation on O2. The Kore has two envelopes. O1's envelope is a peak-shaping circuit which can make the oscillators ring in proportion to the peak of the signal. O2's envelope is a variable-speed, adjustable voltage-controlled filter with an attack, decay, and sustain times ranging from 2 to 48 milliseconds. O3's envelope is a similar voltage-controlled filter, except that it is not triggered by the O1 envelope. The O3 envelope's filter frequency can be tuned, allowing the player to achieve

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may. Causes hearing loss and damage. Accessories – This equipment provides transmission to distance up to 100 meters. This equipment complies with Part 15 of the electrical safety. safety on electromagnetic radiations. This equipment uses the Bluetooth® version 2.1. Package includes only portable microphone. This equipment is designed to fffad4f19a
