is there any other program that can do that? because, in my experience, there are very few programs that can help me to do that. I prefer the method of deleting data and then resizing my partitions, which is really time consuming. A: I've been using this Free tool - this is just a working link : Effect of salt and sorbate concentrations on the distribution and consumption of sorbic acid, benzoic acid and iso-benzoic acid in a lactating cow diet. An experiment was conducted to determine the effect of salt and sorbate concentration on the distribution and consumption of sorbic acid, benzoic acid and iso-benzoic acid in a lactating cow diet. For the first 14 days of the experiment, sorbate was added to

salt at five different concentrations: 0.5, 1.0, 1.5, 2.0 and 2.5 per cent of salt weight. The concentrations of sorbate in diets in the second phase of the experiment were 1.0, 1.5 and 2.0 per cent of salt weight. Diets were offered daily in a total mixed ration (TMR) system. The sorbate concentrations did not affect the amount of sorbate consumed by the cows. Sorbate was distributed almost entirely to the rumen. The fractional absorption rate of sorbate by lactating cows was highly variable and averaged 0.002 (sd 0.0032) of sorbate absorbed per gram dry matter consumed in the rumen. The isomeric benzoic acid fractional absorption rate was 0.017 (sd 0.0038). Lactating cows were

able to metabolize at least part of the sorbate in their rumen without absorption from the small intestine. Sorbate was also used to limit the oxidation of iso-benzoic acid and benzoic acid to phenylacetic acid, with an average rate of 0.0046 of iso-benzoic acid (SD 0.0030) oxidized per gram of iso-benzoic acid consumed. The most effective strategy to prevent the bioavailability of benzoic and sorbic acid in the diet was to limit the intake of these acids. 2d92ce491b
