Kernel for Outlook PST Repair.Sandwich designs are known to be appeizing and nutritious. The traditional "sandwich" is essentially a combination of bread and a meat/cheese product that is opened in two halves, allowing the user to eat the middle without cutting the bread. Sandwiches are consumed in a variety of sizes including "mini-sandwiches", and "hand-sized sandwiches", and the hand-sized sandwich may actually be as large as an adult hand. Such hand-sized sandwiches are typically manufactured by first providing a breaded-meat product. This breaded-meat product is then sliced and positioned, one piece on each half of a piece of bread. The sandwich is typically completed by placing a topping, such as cheese, on one side of the meat, and any other desired ingredients on the other side. The breaded-meat product is secured in place on the bread by frying or baking the sandwich, typically at a temperature of about 350 degrees Fahrenheit. Such hand-sized sandwiches are served by placing them on a plate or tray. In order to make the hand-sized sandwich more easily accessible, the sandwiches are sometimes placed within a clear bag. The above described process has been modified to include layers of ingredients that allow a sandwich to be made and then folded. U.S. Pat. No. 5,974,564 describes a paper sandwich that is folded into the shape of a rectangle. One side of the sandwich is formed from a flat sheet of paper that has been pre-printed with a label. The pre-printed label is glued to the flat sheet of paper, and a sandwich is assembled by placing layers of ingredients in the layers of paper. The layers of ingredients are assembled by hand, or alternatively, they can be assembled by machine. After assembly, the sides of the rectangular paper sandwich are folded to form the sides of the sandwich. The resulting folded sandwich can be placed into a lunch container or onto a plate. The use of such folded sandwiches creates problems in the sandwich industry. Since the top and bottom layers of the sandwich can be separated from each other, the sandwich may have an uneven feel and weight. In addition, the sandwich may be difficult to hold in the hand when it is hot, and 2d92ce491b
