Book reviews I went through this book and I would recommend it to everyone. I read this book at night before bed, the next day I had to get up and write my own review on it. I enjoy reading and writing so this was a great way for me to do it. I am excited for the next installment in the series! The story is about a tribe of monkeys which exist on an island which they call Monkey Island. Many of the monkeys are foolish and no good. On the other side of the island is a magical land called Magic Land. The monkeys believe that magic land is a fairyland where unicorns and unicorns live. They believe this since they never seen magic land. Unfortunately, a stranger called Shrek comes to Monkey island and starts causing problems. Monkey island is a home where they eat, sleep and live but they also have fears of some kind because of the stranger. That is the main reason for the book and why the monkeys want to get rid of Shrek but they have no idea what to do. The wordy part of this story was really interesting because you had so many ways to say the same thing. For example, in one place it says "I is what maketh thee mine," which means I am what makes you mine. This is interesting because these monkeys do not know any better. They live this way and would never think to learn better ways to live or think about the way they speak. This story took place over a week 2d92ce491b
