Q: How to know if a Windows Update is mandatory for a specific Windows version? Every now and then I get this yellow notification that a Windows Update is available: ... and, given that my Windows Update is configured to download updates automatically, I can't help but click it. But I'm wondering whether I should. Specifically, I'm curious if I have any kind of control over whether or not Windows will auto-update when a Windows Update is available. My understanding is that there is a "bit" that is set and unset by Microsoft to either not trigger a Windows Update or trigger it. I want to know which bit it is. A: The article below says that you can choose not to install some updates. However, this only applies to those updates you are not prompted to install. By default, Windows will install Windows Updates if they are available. However, you can choose to not install these updates. In Windows XP, you can choose not to install updates under the System tab of the Windows Update dialog box. In Windows Vista, you can choose whether you want to install updates under the System Updates tab of the Windows Update dialog box. A: You can't do it, but Microsoft does. According to the Knowledge Base article KB Article Number, "3235840", this is the scenario: In Windows XP and earlier versions of Windows, the operating system software and applications cannot uninstall or prevent Windows Updates from being installed. This article KB Article Number, "906557", seems to confirm it: I had a situation where a user would receive the yellow arrow message (and the associated message) from a Windows Update that would block access to the Update for more than a day. The user could not view or install updates from the Windows Update button in the Control Panel. A search for the KB Article Number, "906557", revealed the fix for the user: You may be able to prevent Windows Update from blocking your computer from making system configuration changes by using the Group Policy Editor. To fix the issue: Open the Group Policy Editor by clicking Start, clicking Control Panel, clicking Administrative Tools, and then clicking Group Policy Editor. On the Edit menu, point to Preferences, and then click Show hidden files and folders. Click the User Configuration folder. Double-click the Computer Configuration folder. Double-click the Administrative Templates folder. In 2d92ce491b
