BASIC MACRO – What is a BASIC Macro? Basic Macro(s) is the term we use to describe a Batch Import Macro, as it refers to the software’s ability to import more than one image file at the same time. With a Basic Macro, it’s possible to import multiple image files into PanoramaStudio Pro at once, rather than selecting each image individually. For example, you can import a folder of photos into your panorama software all at once and save the project at the same time, while removing all the hassle of selecting each file individually. You can also use a Basic Macro to prepare a panorama project for viewing on a web page or forum, since it’s possible to upload hundreds of images from a single folder in an efficient way, and it also makes it easy to share the panorama you’ve created. The advantage of using a Basic Macro is that it saves you time and money as you do not have to perform the same task several times to import and prepare a project for viewing on a website. A Basic Macro is the easiest way to insert images into your PanoramaStudio Pro project, and it is particularly useful for users that want to quickly import multiple photos, and for users that have hundreds of photos that they wish to embed into a single panorama.

BASIC MACRO – How To Add a Basic Macro to PanoramaStudio Pro? To add a Basic Macro to PanoramaStudio Pro, you must first select “Add/Edit” from the File menu. You’ll see that the selection window will appear, as shown in the following screenshot: You must then select the “Add” button next to the “Basic Macro” option, and you’ll notice that PanoramaStudio Pro adds a new “Basic Macro” option to the selection window, as shown in the following screenshot: When you’re finished, press the “OK” button, and the Basic Macro will be added to the current project.

BASIC MACRO – Basic Macro Options: You can import a set of images in the following ways: 1. Images with the same file names. 2. Images with different file names but with identical specifications. 3. Images with different file names but with different specifications. You can insert images of the same file name with different specifications, but that’s only possible if the image 1d6a3396d6
