The main difference between Safe Mode and Normal mode is that when selecting Normal mode, you will be prompted to select what files and drivers you want your computer to load, while in Safe Mode you will be able to run a short wizard that will automatically choose the files and drivers to be loaded after restarting your computer. Safe Mode is on the first page of Safe Mode options, which means that it is immediately activated if you click the button on the top right corner of the screen. For most users, once they boot Windows in Safe Mode, they will be able to perform all the needed steps to clean their Windows computer and restore it back to normal operation.
