Web Version: License: Homepage: Wikipedia page: Bugs: Toolbox problems If you press Cancel, you will not see the displayed number any more. Downloads: All versions: History: Statements of Support: Last checked: PDF Manual: Report bugs: More information: If you make a mistake when you are converting a number from scientific notation to normal form, you will be informed that the number contains inaccurate digits. This is because there is no automatic way to know which of these digits are inaccurate. In this case you can check the difference between the digits, and verify that only the digits from the right part of the floating point number are inaccurate. Try to work out how the value of the number was initially calculated, if the initial number is 0 or a negative number. If you can't find any information, try calculating a few values for the first digit in the number, and try to find out which number they result in. Double precision numbers contain 16 bits of accuracy, but only 15 bits are stored in the data type of the significant digits calculator. This results in numbers that contain only 6 significant digits. This is the default rounding mode of the calculator. You can change the rounding mode, or set it to single-precision, by pressing the button with the number 1 next to it. If you press the Update button, the calculator will request the location of the

JavaScript files and add a link to them. This is to make sure the download link works properly. If you press OK, the JavaScript files will be downloaded and opened in the browser. If you press Cancel, the operation will not be performed. Currently this only works when the JavaScript files are in the same folder as the HTML file. This is because it uses this folder as the temporary folder for downloading files. Currently the calendar is not completely compatible with the version 3.2.2.0 of MathJax. Therefore, the calendar does not show the year that was calculated by MathJax, but the year used to enter the number. The only time that the error message is shown is if the number is 0, and you press the Cancel button. If the number is positive, you won't see the error message, and when you press OK, the numbers will be rounded to 6 significant digits, even if you set the
