2016 and beyond At the 2016 CropCon user conference, Autodesk announced "Catchpoint", an initiative to allow users of its software to interact more easily with their creations using AR and VR technology. Autodesk also introduced the Essential Project Service as a cloud-based

subscription product in September 2017. The Essential Project Service allows for teams to share, collaborate and access plans, designs, documents, and schedules in a more efficient and organized manner. In February 2019, Autodesk unveiled a partnership with Argo AI to add autonomous driving technology

into AutoCAD and SketchBook Pro. Integration with social media and other online platforms AutoCAD is integrated with several social networking sites, such as Facebook, Twitter, LinkedIn, Flickr, YouTube and Instagram. It also integrates with other third party products, including Microsoft Office,

Microsoft Project and Microsoft Office 365. History AutoCAD was originally developed by Dutch company Cedit Software BV and was the first 3D CAD program in existence. The original version, in 1982, was a drawing program named Cedit PC-D (Pascal-Cedit) that was licensed to the Zync, a British

publisher of construction data that also published a CAD package, as Cedit DT. The Zync CAD package was the first to provide block data for structures, and it was soon acquired by MicroStation Systems, later renamed 3D Systems. In 1986, the company was purchased by 3D Systems, an American

company founded by David A. Evans in 1982. According to Evans, he was inspired by the ability of the National Center for Atmospheric Research (NCAR) to produce workable CAD geometry at a fraction of the cost of using traditional drafting techniques. As a result, he approached Zync's programmer

to adapt the programming language to the needs of making geometry for AutoCAD, which was being used at the time primarily for architectural and engineering work. Because the basis of AutoCAD was an early and incomplete version of the Intergraph DGN language, Evans decided to adopt the DGN name

for his own product. In the beginning, 3D Systems used a licensing system in which users paid one fee to Cedit Software and another to Cedit DT. 3D Systems replaced the DT license with its own license, and started selling the product under the 3D Systems brand. In the 1990s, 3D Systems attempted to make it as

Lance Gibbs believes the ARU have a chance of beating the Super Rugby giants from England if the Wallabies and the British and Irish Lions can come together on the same page. The Waratahs captain

acknowledged that Australian rugby's governing body has endured three seasons of poor performances and the impact that has had on the domestic competition. But he believes the Wallabies will catch the Welsh-based teams in the southern hemisphere if the two nations work together in 2016. "It's still

got to come together at a group level, but in saying that we've got one of the best back-lines in the game," Gibbs said. "In the forwards we've got some guys who can compete at a world-class level and we can start having some big games. "We've got a strong team for the future. In saying that we're currently

underperforming, we've got some guys who haven't quite got it right or have had injuries and that's been an issue, but there's no doubt that we can compete with the top sides in world rugby." When asked whether the fact the Wallabies have won just four of their nine Test matches in 2016 could be damaging for the

domestic competition, Gibbs was adamant his team were up for a new year's clean slate. He added that the Wallabies should also be proud of the fact the Australian conference has been the best in the world for the past three years. "It's the toughest competition in the world, but that shouldn't be a problem for us," he said. "We've

been a top team for three years and we're in a good spot and, if we're all good together, we should be right up there. "I'm sure it's tough for the fans, but they should be proud of the Australian team and their league. I think the next few years are going to be tough but we've got the best team in the world and

we're going to be right in there."
Gibbs said that while most of his

What's New in the AutoCAD?

Draw geometries in more than
one view at the same time.
Control multi-view geometries in
3D. Or show models in multiple

views in AutoCAD at the same time, making it easy to preview and correct multiple views. (video: 0:52 min.) Create drawings from scratch or start with an existing drawing that you edit to make changes. Drawing tools make it easy to adjust the size, shape, or placement of your design. (video: 0:55 min.) Shape

Sets: Shape Sets are an easy way to combine shapes and apply them to multiple parts of your drawing. Add common shapes to a Shape Set and access them easily in the parts palette or automatically in a common legend. (video: 0:55 min.) Perspective Viewport: Build and view your 3D models in

perspective, keeping the perspective lines in the background, but changing your view to view 3D objects from the correct angle. (video: 0:55 min.) Labeling: Gain improved speed and precision when labeling. Adding and editing labels is easier than ever, even with large, multi-line labels. (video: 0:55

min.) Powerful collaboration tools: A new web app for AutoCAD simplifies collaboration and teamwork. Share your work in real time with others. Comment on drawings and edit drawings with your teammates. Teamwork tools make it easy to work together without disrupting your work.

(video: 1:10 min.) Comprehensive, forward-thinking, and sometimes challenging, feature upgrades are part of the new release of AutoCAD. Backed by three powerful brand names, AutoCAD users have come to expect cutting-edge, feature-rich, high-performance software. But

AutoCAD is now moving even further ahead, offering even more ways to turn ideas into reality. AutoCAD's new features focus on a true paradigm shift: Designing and creating architecture. With these new capabilities, you can design buildings, cities, and interiors. You can even design virtual

worlds and explore them in 3D. Creating architecture is a complex, multilayered process. You need to collaborate with a team of architects and collaborate with project stakeholders. At the same time, you need to execute your design quickly and consistently. You also need to work with multiple computer

platforms and a variety of software tools.
