## Harmony With Registration Code

Harmony Description is an easy to use audio software that helps you change a clip containing speech into a silent one. Unlike other speech remover applications, it's not about filtering the sound, but about extracting it. When you start Harmony Description, you are offered a variety of options, such as Auto, Manual, and Compensate. The first option simply deals with speech recognition, as the software will listen for a specific set of words, and it will sound an alarm signal and mark the boundaries of the speech, in case you're not satisfied. When Auto is selected, you are given the choice to what degree you want to go, with a diverse selection of features. You will be offered one of the following settings, depending on the type of input file: Normal, VBR Tagged, or Mp3. Normal is used to remove speech in the file if the file is normal, with no vocals and no annoying bleeps. VBR Tagged is used to remove speech in the file if the file is tagged for compression, which is the case when using mp3 files. Finally, Mp3 is used to remove any speech from the file if it's in an mp3 file. Manual works as a basic (low resolution) voice recognition to quickly remove speech. Compensate works as a speech enhancement program, which deals with the separation of speech from other segments. However, in order to apply compensations, you need to specify a voicing of one or several files and the maximum gain, or pitch compensation. The compensation interface can be used for either removing or enhancing a specific segment. Once you specify a segment, the software will let you know whether or not it's suitable, and it will provide the resulting compensation if you want to apply it. There are settings for removing various ranges of frequencies, such as high, mid and low frequency, or limiting the gain so that only specific points in the spectrum will be affected. Another important feature of Harmony Description is the automatic demixer, used for separating frequencies into their individual components. When you start the program, you are given the choice to what degree you want it to work, with a diverse selection of settings. The higher the voice pitch, the more accurate the operation. Finally, the other element in Harmony Description's arsenal is the Click Remover. This feature is used for quickly eliminating sound with the click of a button, and it can be used to eliminate various sounds
