Frequent loss of heterozygosity in the 3p14 region in endometrioid carcinomas. Endometrioid carcinomas of the uterine cervix and endometrium have been suggested to represent one and the same tumor, the cervical and endometrial carcinomas being of the endometrioid type. However, in a previous study, loss of heterozygosity (LOH) at 17q was found to be present in 50% of endometrioid carcinomas of the cervix and in 91% of endometrial carcinomas. The present study examines the presence of LOH in 11 additional tumors of the endometrium and 5 tumors of the cervix. The endometrioid carcinomas of the cervix and endometrium demonstrated identical LOH frequencies at 17q (7/11 endometrial carcinomas, 2/5 endocervical carcinomas). A systematic screening for LOH in the region of 3p14-14 revealed a frequent LOH in the region of 3p14 (8/11 endometrioid carcinomas, 4/5 endocervical carcinomas). The region 3p14-14 has previously been suggested to harbor the FHIT gene. These data suggest that LOH at 3p14-14 is an important genetic event in endometrioid carcinomas of the cervix and endometrium.

Q: How to read an ini file asynchronously?
i want to open an ini file that has some parameter and save the results to a database. Here is my code:

System Requirements:

To play the game, you'll need a system with a graphics card that supports DirectX 11, a Windows 7 operating system, and 4GB of RAM. The minimum system requirements are 3GB of RAM and Windows XP, so upgrading your system should allow you to play the game. Please note that the game is being optimized for DX11, and DirectX 10 games will run on DX11 graphics cards, but will be limited to DX10 or lower graphics settings, which may result in screen tearing and lower visual quality. DirectX 11 games will require 4GB of RAM and Windows 7 or
