Jasob is a powerful tool for Java obfuscation, renaming, compilation and packing. It can rename variable and method names, and replace their contents with other random values. It works with both Swing and AWT components. How does it work? 1. Just run Jasob once for your project and it's done. 2. You can see the results of the obfuscation in the content of the "New Code" tab. 3. You can use the "Rename" button to edit variable and method names. 4. You can also use the "Compile" button to compile your code to your favorite Java Virtual Machine (JVM). 5. You can use the "Pack" button to create a.jar file for you app, and optionally obfuscate it (hide your code from the Internet). How to use: 1. Download Jasob here: 2. Double-click on the downloaded zip file to decompress it 3. Launch Jasob (for Windows users). You'll be greeted with the Jasob main window. Click on "New" to create a new project. Give it a name and click "Next". 4. Choose "Java Project" from the list. Then click "Finish". 5. You're done! Now you can start modifying the code. Click on "Rename" to rename variables and methods, or click "Compile" to compile the source code into bytecode. Click "Pack" to create a.jar file, obfuscate it, and create a.jsp file (and .jad file for Palm OS). Tested with JDK 6u13 and JRE 6u13 Description: A Java obfuscator, renamer, and packager with built-in decompiler. Compiles Java sources
