## OJOsoft VOB Converter [32|64bit]

OJOsoft Video Converter is a simple-to-use application designed to help you convert video files from the VOB format to other extensions, such as AVI, MPEG, MP4, 3GP, FLV and WMV. The interface of the program is plain and simple to navigate through. Video clips can be imported into the list by using the file browser only, since the "drag and drop" method is not supported. Batch processing is allowed. So, after you establish the output directory and profile, you can proceed with the conversion job. But you can also configure audio and video options when it comes to the frame size, aspect ratio, resize method, compression, bit rate, frame rate, sample frequency rate, and others. Settings can be restored to their default values at any time. The video conversion program runs on a low-to-moderate amount of system resources, can guide you to a well-drawn help file with snapshots online, quickly finishes a task and manages to preserve a very good image and sound quality. We haven't come across any issues during our tests. Unfortunately, you cannot configure the program's behavior (e.g. enable to automatically turn off after conversion) and the interface is outdated.
