While Excel and LibreOffice have the same syntax for reading/writing csv files, Python and Ruby use different syntax. In case you use LibreOffice, there are still simpler ways to read/write csv files. LibreOffice has a read/write option. Format -> Cells -> Load from and write to (*.csv) There is also a java library called POI Your usecase can be achieved by: # Read file "input.csv" csv = CSV.parse(File.open("input.csv")) # Write data to file "output.csv" csv.to_a.collect { |row| row.to_hash }.to_csv("output.csv") or alternatively: # Read file "input.csv" csv = CSV.parse(File.open("input.csv")) # Write data to file "output.csv" csv.each_with_index.to_a.each { |row,index| row.to_hash }.to_csv("output.csv") or even simpler # Read file "input.csv" csv = CSV.parse(File.open("input.csv")) # Write data to file "output.csv" csv.each_with_index.to_a.each { |row| row.to_hash }.to_csv("output.csv") The same should work for python EDIT: Your approach should work for ruby. However, your input data are not quoted: "One-Two-Two-Three" This should be a string with content of "One-Two-Two-Three". Q: HTACCESS not working with post/get functions I'm having trouble changing my app's url structure from something like this: /myApp/pages/actionName.php?id=123 to /myApp/pages/actionName?id=123 The directory structure is: myApp/ pages/ index.php 82138339de
