Freeware -- Download the program to check for long or blocked paths. After that, right click on a file and select "Open with" and then select "Long Path Tool". Click on OK. You can then delete this item. It is a very small and quick app, so don't expect it to take a lot of time to delete the files. It looks like the "Paths" portion of the "Folder Options" dialog is updated. I have no idea why this did not happen in your case. I found this tool very useful. I was running Windows Vista and using Total Commander and was transferring large amount of data from my main PC to my laptop. The transfer process was about 60GB and I wanted to copy it to the external drive. I had a normal shortcut to the drive, but when I tried copying the data I got the error "The process cannot access the file because it is being used by another process" It was weird, because Total Commander was copying the data to the external drive and doing it very quickly. When I tried copying to the external drive again, the error still came up and I got some odd error message, stating that the folder (with all the data) wasn't there (I can recall looking at the drive and checking if it was still connected to the external drive). In the end, I deleted the shortcut on the main computer, restarted the laptop, re-connected the external drive, and then I was able to copy the data. Of course, this is a slight inconvenience that I don't want to repeat and the fact that I can't say for sure if the problem was that I copied the data using Total Commander, the shortcut problem, or whatever. The point of this is that this tool was able to copy the data without the error message. If someone has a better solution to the shortcut error, please let me know. I use this tool on a fairly regular basis. I was very surprised to see it is freeware. I have been using it for months with no problem, and I am going to continue to use it. I have several hundred items on my PC to scan, and so far I have never run out of free space. My only criticism is that the path it displays can be misleading. For example, some of the paths are too long to even be visible in the dialog box. If you hit the ok button and then
