CA de Moura Barboza et al. 2011 Cited by 1 Scientific Prints, 2009. 2007 Cited by 7 4Calcspongia anomala is the most prevalent hard coral species in Palmares reef. São Paulo, Brazil. Martha Lucena – Mariana Linco Bertasso, Department of Zoology, Universidade Federal de . 5. . . Peter Castro. Peter Castro created a Marine Biodiversity Biodiversity Database (MBBD) (pdf) in March, 2014 Peter Castro created the Marine Biological Database (MBBD) in 2003 and developed an update in 2009. The MBBD is a meta-database built from four databases and contains 12,626 registered taxa, with 16,392 additional taxa and 17,213 synonyms Use of MBBD MBBD is the most comprehensive biological information repository on the São Paulo marine fauna. It provides the most accurate and up-to-date information on the marine fauna and other biological resources in the State of São Paulo. MBBD covers the State's marine and coastal zones in 21 marine ecoregions (including the Antarctic and Indian Oceans). Among its data is an up-to-date selection of regional marine biological information, including species composition and distribution, physical-chemical and biological data, marine fauna and flora of recreational and commercial interest, ecotourism, environmental impact of human activities and marine environmental monitoring data.
