PagePlus Starter Edition is a lightweight desktop publishing application designed to help users design creative documents which include pictures and text messages. The layout may seem a bit overwhelming at a first glance, but this is only because the tool comes packed with many dedicated parameters. PagePlus Starter Edition gives users the possibility to create a new document by selecting from various layouts (e.g. business cards, banners, portrait or landscape items, folded booklets and greeting cards, posters, address or CD/DVD labels). What's more, you can add, delete, or rearrange pages, create master pages (which include logos, background images, header and footer, or border design options), as well as configure the properties of a page. The application allows you to select between a wide range of background templates, insert page number fields, work with multiple layers, use a ruler as a measuring tool, insert pictures, add tags, rotate, flip, combine, or crop the selected objects, as well as insert borders and logos. There are several editing tools designed to help you embed text messages which can be customized in terms of font, font style, size, color, wrapping and alignment options, design text-based tables, use special characters (e.g. symbols, variables), as well as insert hyperlinks, audio files (MP3, AIF, WAV), and video items (AVI, FLV, MPEG, MP4, MOV, SWF), Last but not least, you can import data from PDF file format, merge photos, create table of contents and index entries, draw and edit lines, apply 3D effects for designing textured surfaces, use connectors for linking lines between two objects, add picture frames, and set the transparency level. The generated document can be printed, exported to PDF, HTML, EPUB, or MOBI file format, or sent via email. During our testing we have noticed that the program offers very good image quality, and no errors showed up throughout the entire process. PagePlus Starter Edition Cracked Version offers several templates for creating cards, banners, posters, etc. Using this tool, you can create a new file from scratch, open an existing document, or select one of the available templates. After opening the application, you can switch between two views: Edit and Window. The first view gives access to the document's properties, while the second one shows the layout as well as the design preview area. The preview area can be placed on the left side, at the bottom, at the top, or on the right side of the application window, so it can be placed in any position you want. You can add and remove objects, and the editing mode allows you to edit and copy and paste text, edit images, insert hyperlinks, add borders, add headers and footers, and create a document template. When creating a new document, you can choose a layout or select an existing one. You can also rename the file, set its file format, insert a picture, add tags, and change the document's background color. Creating a document using the application is a very easy process. After selecting a layout, you can set up a background, add page numbers, and crop, rotate, flip, or scale pictures. When adding a picture, you can choose from several different picture sources, such as JPG, GIF, and PNG, and save it to a desired location. You can also adjust the image's size, crop, rotate, flip, or scale it. There are various other features included with the application. For instance, it lets you set up text style options (bold, italic, underline, text color, size, etc.), insert a ruler, create document tables, add an index, merge images, and more. You can also insert hyperlinks to other documents, add video or audio files, and create symbols with a text effect. During our tests, we found that the application's editing tools are accurate.
