What's New in the AutoCAD?

Markup Assist simplifies the process of incorporating changes to your drawings. It builds common composite objects, including walls, doors, and windows, based on your predefined shapes, such as windows and doors. With AutoCAD's new markup engine, you can import PDFs of designs, sheets of paper with feedback, and even photos of your own designs, to apply them to your drawings. You can also set and save a "template" of your design, which you can then apply to other designs you create in the future. Drawing Easier with Easel: Take control of drawing commands. With Easel, you can get started quickly with a single mouse click—instead of entering a command and having to recall it. Automatic drop lines to show you the actual position of objects relative to each other. With these new drop lines, you can see exactly where you are in your drawing when you add objects, and you can easily see changes to your drawings. Easel, the new drawing tool, uses the space you're drawing in to simplify drawing operations. You can now use the Easel tool to draw more objects in a given space than you could with the Dynamic Input tool. Easel includes many drawing tools and commands. Drawing more effectively with new edit and motion commands. Now, if you need to move a complex object, such as a room in your house, you can use the new Move command, as well as the new Motion Paths tool. The new Edit command enables you to edit 2D and 3D objects interactively, and the new Edit Paths command enables you to quickly place an object using the path command. Smart Selection Tool and Improved Path Selection: Free up your workspace by hiding unnecessary objects. With the new Smart Selection tool, you can hide objects and attributes so that only the areas you need to see remain visible. You can also hide linked objects, such as doors, windows, walls, pipes, and electrical boxes, so that they don't clutter the view. You can also hide portions of lines, text, and dimensions. (video: 1:35 min.) With the new move path command, you can quickly and intuitively select objects on the 3D drawing. Just click to select the objects you want. Then, the move path command displays
