AutoCAD lets users create, edit, and view 2D drawings that are oriented vertically (i.e., on a flat surface or viewed head-on) as well as 2D drawings that are oriented horizontally (i.e., on a flat surface or viewed from the side). As of December 2016, Autodesk had more than 4.8 million AutoCAD users and over 11.4 million total licensees. Autodesk, Inc. is a global designer, developer, and marketer of software applications for the construction, manufacturing, and media and entertainment industries. Founded in 1968, Autodesk employs more than 13,000 people worldwide and is headquartered in San Rafael, California. AutoCAD History Autodesk, Inc. was founded in 1968 by Charles E. ("Chuck") Bartholdi, a science and math teacher in San Francisco, and Joe Herbert, a patent attorney in San Francisco. The original name of the company was International Time Sharing Systems (ITS), an enterprise software company serving the time-sharing business. It was formed to develop and market the ITS Time System, which consisted of software and hardware that allowed multiple users to simultaneously use a computer in a way similar to the original time-sharing concept. In 1969, Chuck Bartholdi and Joe Herbert left to form Star Microsystems, a hardware startup in Sausalito, California. Star Microsystems had a contract to produce a specialized circuit board called the "Frog Card," which could be used to connect a computer and time-sharing console together. In 1971, Star Microsystems released the first computer system that was completely controlled by a general-purpose microprocessor. The first version of the Star Microsystems operating system, called Mark-8, was the first time-sharing system that utilized hardware to manage the time-sharing allocation of a computer system's resources. Star Microsystems also designed and released the first commercial mouse, which controlled a mouse-driven cursor on a monitor by detecting the position of a magnet on the underside of the cursor on the top of a mouse pad. It was used to select items on a menu and to click a button in a software application. The first mouse to be released was the Star MPS-2, released in 1975. In 1973, Joe Herbert and Chuck Bartholdi left Star Microsystems to form Symbol Technologies, Inc. (STI),

ACAD The ACAD API is available for AutoCAD LT, ACAD DWG, ACAD DWF, ACAD e-Rep and ACAD Graphics Designer. It is the default API for drawing functions. It is a low-level DLL and provides functions for drawing geometry, saving drawings to and retrieving drawings from file storage, handling rendering, and setting options. ACAPS ACAPS is used in conjunction with VCL through the ACAPS.LIB library. AutoCAD Architecture adds a graphical user interface to the .NET API, allowing designers and architects to create plans, site models and other drawings. As of AutoCAD 2014, the .NET API is the only one for AutoCAD. AutoCAD LT, ACAD DWG, ACAD DWF, ACAD e-Rep and ACAD Graphics Designer use the ACAD API. AutoCAD Architecture has its own API. TI-BASIC The TI-BASIC API is available for AutoCAD LT and ACAD DWG. It is a graphical BASIC variant that allows developers to use the programming language in AutoCAD through the TI-BASIC library. TI-BASIC was developed by Autodesk in the 1990s and was the language of choice for programmers writing extensions for AutoCAD, whether for commercial products or as "open source" programs distributed by Autodesk. AutoCAD Web Alliance AutoCAD Web Alliance was an API that allowed clients to use Autodesk products on the Web. It was replaced by the Web API in AutoCAD 2012. BASIC file format The BASE file format is a variant of the Basic Language that can be loaded by the BASIC Editor, allowing users to control the application. The format was derived from the BASIC variants used on the TRS-80 Model III, TRS-80 Model IV and Apple II. It is also the format of the application program that interprets the BASIC language. The .DEL extension is added by certain versions of AutoCAD to file extension or to the name of a file created using the DirectDraw software. DirectDraw Software The DirectDraw software is a tool for implementing DirectDraw API functions. DirectDraw Interface The DirectDraw Interface (DDI) is a set of functions and structures that allow an application to interact with the DirectDraw hardware of the PC's video card. SOCIAL "My dad always said to me that I should listen to other people's opinions, but I didn't. The second I said something I felt the oppositie say, I realized that I needed to follow my own." I wish my parents had had words of wisdom that my mother had told me years ago: "Everyone has something to teach you." I am sorry my dad never had the chance to tell me. I have spent my life following my passion, ignoring everyone's opinion and being me. It took a friend to point out that I wasn't listening to the other voices. Now, for a true story from another friend. The friend I told this story to is a young businessman who's working on his graduate degree. On his way to his appointment, he told me: "I took my earpiece out and I listened to my coworker in the conversation. She spoke with confidence, passion and conviction. I want to make her sound so cool because I admire her. She said, 'I'm not going to be the next Steve Jobs.' She did not have that fear that kept me in my chair. That got me thinking. I should listen to people around me." I could not believe that someone in this century would have the fear to go for the next Steve Jobs. I told him how much I believed he should listen to people in business and he didn't have to be the next Steve Jobs, but he said, "Yeah, I'll take that chance."Q: How can I extract text between two strings in an HTML document with Python?
