TSHR mRNA level was maintained at a high level until the 28th day of age. T4 treatment on day 6 of life caused a significant increase in TSHR mRNA level on day 7 and 10. When the dose of T4 was increased to 5.5 micrograms, the TSHR mRNA level increased on day 10. The data suggest that thyroid hormones play an important role in the development of TSHR mRNA level.Q: Vertical Nav/Menu on the
