If you try the free trial version, you will get a full version of AutoCAD software. You can either download it from the Autodesk website or get it from the installation disc that you get with your initial purchase of AutoCAD software. Direct View AutoCAD Product Key LT is the only version of AutoCAD which is capable of using Direct View. Its primary user interface is a feature-rich, tree-view tree in which a drawing is arranged in a hierarchical structure. It is unique in that it utilizes the screen to keep track of several pages of a drawing. The following drawing is placed on the first page, the drawing on the second page is placed on the third page, etc. This allows the user to easily reference and move between views. The content of any drawing is organized in one or more frames, which can be arranged in a linear sequence to give the appearance of a paper tape. Drawing panels are also arranged in a tree structure, and can be arranged to overlap the content in the primary frame, or be kept on their own. Unlike the normal editor, all of the drawing frames are retained in the tree view so that they can be manipulated. Any selection can be moved, added to or deleted from a drawing. Since this is a relational database, it is possible

to insert, delete, or move frames with relative ease. Drawing panels, like frames, can also be arranged in a tree structure. They have a similar structure to the tree frame, but their content is not visible in the tree, only in the drawing. Each drawing frame and drawing panel can be made into an object in the ObjectARX API, which makes it possible to programmatically manipulate the drawing and draw panel objects. 1. Field of the Invention The present invention relates to a connecting structure of an optical fiber array and an optical waveguide, which is suitable for use as an optical component such as a wavelength division multiplexing optical fiber or an optical waveguide, for example.

2. Description of the Related Art A patent publication 1 (Japanese Unexamined Patent Application Publication No. 10-136059), a patent publication 2 (Japanese Unexamined Patent Application Publication No. 10-226572) and a patent publication 3 (Japanese Unexamined Patent Application Publication No. 11-153627) have been proposed in the past in the connection structures of an optical fiber array and an optical waveguide. In the patent publication 1, a structure for mounting an optical fiber array is disclosed. As shown in FIGS. 1A and 1B, the structure is characterized in that a single optical fiber 90 is fixed by an adhesive agent 91 on an optical waveguide 92 that is positioned on a mount 93 on which an optical waveguide 92 is fixed with an optical waveguide 95 being interposed therebetween. In the patent publication 2, a method of connecting an optical fiber array is disclosed. As shown in FIGS. 2A and 2B, in the connecting method, an optical fiber array 10 is fixed on a mount 21 by the action of an adhesive agent. In addition, an optical waveguide 22 is formed by a reflective mirror 22a being provided on the inner surface of a dielectric body 22b. Further, a projecting part 22c that is formed by a rectangularly-cross-sectioned tubular body is formed at the center of the bottom surface of the reflective mirror 22a, and a cylindrical part 22d that is formed by another rectangularly-cross-sectioned tubular body is formed by the bottom of the rectangularly-cross-sectioned tubular body 22c being vertically extended.
