Cutting and pasting I place great importance on the ability to copy and paste (or cut and paste) parts of an image into new images in Photoshop. A small mistake in cutting or pasting a part of a photo and replacing it with another image can be costly. Using the Photoshop Trackpad or the mouse provides a simple method of copying and pasting objects or portions of images from one layer to another. Clicking the Layer menu and choosing Edit→Copy gives you a new layer in your image with a dotted outline around the area that you're copying. The dotted outline doesn't affect the image, nor does it affect the blending modes of the underlying layers. You can delete the outline by choosing Edit→Clear Layer Outline, and then the entire copied object is removed from its source. Select the layer in your image that you want to copy. Then choose Edit→Copy. Go to your new layer and click to select that layer. Then press the Shift key and click to select the entire image. Figure 11-5 shows you how to use the Shift key to add a layer to a selection. **\*\*Figure 11-5:\*\*** Shift selects the entire image. When copying from a layer to an adjacent layer, the copied part appears in its new layer with a transparent background and a halo around the item. The halo appears as a white border around the object and is removed by clicking the Layer menu and selecting Soften. You can use the Selection tool to copy just a portion of an image. Press and hold the Ctrl (Windows) or ⌘ (Mac) key while you select the area
