This is a macro to help you save time and get your keyboard shortcuts right. It does so by being loaded as a standard Microsoft user once you have your computer rebooted. KM has some limitations, and could be improved. For example, it will only work with US English keyboards, there is no way of changing the behaviour of the keys if you have different keys on your keyboard,

and it doesn't set the keyboard macro for you, so you have to do that yourself. All of these can be overcome by simply using the keyboard viewer. Installation: Right click on KM_CORE.exe and select "Run as administrator" and then click "OK". The setup program will be downloaded. The setup program will extract the files, extract the file in KM_CORE.ini and will install KM_CORE.ini into your C:Program Files dir, along with the KM_cores folder. Troubleshooting: During the installation process, if you see the following error message: "The file "KM_CORE.ini" could not be opened. The specific cause of this error is the file is either missing or corrupt." The file KM_CORE.ini could not be opened. The specific cause of this error is the file is either missing or corrupt. This is due to the fact that you are running the KM_CORE setup in Windows XP Service Pack 2. Go to Start > All Programs > Microsoft Windows XP > Accessories > System Tools > View and select the "Check for Updates" option from the Microsoft Windows XP - System Information dialog box. Install the updates. Close all open programs and windows. This will restart your computer. Reboot your computer. Close all open programs and windows. Reboot your computer. Close all open programs and windows. Reboot 77a5ca646e
