These simple techniques for basic Photoshop editing can be incorporated in your life with ease and there is no reason you cannot use some Photoshop skills now. When we work with images and get involved with them, we are essentially managing them. From the time we see them on our digital camera, we are adding them to our computer and creating our own version in the format that we see them on our monitor. This process of editing involves different methods that we can choose from, but for the majority of people, they want to use Photoshop to make the task simple. The Photoshop editing tools are very easy to use. There are quite a few tools out there that we can use and make use of the different features of Photoshop. When we look at basic editing processes, we generally choose the Brush tool. This is found in a menu on the left of the screen and is used in most instances to add a little more detail to an image. If we go into the tool options, we are able to change the size of the brush, texture, opacity, and flow. To use the tool, you need to either use the keyboard shortcuts or the shortcuts in the toolbar. When it is set up, you are able to use the brush to draw various techniques around the image, such as changing the colors, adding highlights and shadows, and anything else that you can imagine. To save the changed image, there is a Save As option located in the File menu. Once the image is saved, we will generally name the image in the filename bar. If we look at the other editing tools, such as the Magic Wand or the Lasso tool, they can be very helpful tools to get the job done. The Magic Wand tool is used when you want to select a specific area of an image that you want to work on. You can change the size of the brush size, opacity, and color to change the color of the tool. You can use the Lasso tool to make areas of the image selectable, and you can do this by pressing the Alt key, left-clicking, and drawing a rectangle around the area of the image that you want to change. Using the tool will automatically change the color of the image to the color you used to draw the image with. If you use the P key, it will turn the tool off and you will be left with the selection area. To deselect the area, you can press
