AdvertisementQ: Remove.php Extension From URL I am creating a website. I am using a plugin which provides a PDF form builder, and when you save, the.pdf file has a.php extension. When I click on the PDF file, it displays the PDF contents, but if I click on it, it takes me to the.php file in my url. How do I stop it from displaying the.php file? You're seeing it in your browser because you've uploaded a.php file. Upload a test file that's only.html, open it in your browser and you'll see it's not.php. The following line makes WordPress

automatically run your.php files:

`add_filter('parse_request', 'wpse_3017');` To stop this, remove it: `remove_filter('parse_request', 'wpse_3017');`

A: Well, this might not be right because I don't know how you are presenting the file, but try changing the `add_filter(...);` line in `functions.php` to the following: `remove_filter('parse_request', 'wpse_3017');` Or try turning the .php extension back on so that you're not have it automatically.
