I recently released my first app. I have a galaxy S for testing and my mom has a Lenovo with OS 2.3.3. When she runs my app on her phone, I can see the background image. I can't on my phone. On my phone when I run the app I get this: 12-12 22:17:17.792: E/AndroidRuntime(596): FATAL EXCEPTION: main 12-12 22:17:17.792: E/AndroidRuntime(596): java.lang.RuntimeException: Unable to start activity ComponentInfo{com.solomon.trial/com.solomon.trial.SplashActivity}: java.lang.NullPointerException My phone is rooted. Any idea why my app would work on one phone but not the other? A: There are two solutions. If you just want the activity to start on the device that has problems: Take a look at this question. If you want to replace the activity's content (this will not work if you want to start the activity twice, but it will work if you want to replace the whole activity with a new one): Take a look at this question. Mr. Nicholson's message to Mr. Corzine and other candidates was that, if they don't reverse the vanguard-to-vanguard move, the jobs will leave and careers will have been wasted, never to return. With the possible exceptions of Boston and Washington, the high-tech industry that has boomed in the Northeast is concentrated in an area that's a few blocks wide and 15 miles long: Route 128, a strip of subprime real estate stretching from the suburbs of Boston to Somerville and Medford in Massachusetts, to the already revitalized waterfront in Providence, R.I., to the sprawling south suburbs of New Haven, Conn., and just west of Boston to Watertown. Route 128 runs from the bay to the foothills of the Berks

Hyper Shelf is a fully integrated and easy to use workflow based on metadata-based audio processing and tools. Hyper Shelf: * shows audio metadata in waveform visualization and extracts various audio metadata from audio files. * adds several effects to the audio that can be applied to audio data of all standard file formats in an integrated way. * introduces the concept of virtual audio racks where audio/video files can be grouped together to create unique effects. * preserves time-stamps and information from the original data for easy audio editing/editing history. * supports MIDI support to define and control many virtual audio racks. * supports the fine control of many parameters like effect depth, effect strength, pan, etc. * also supports the mixing of multiple audio racks. * supports multiple audio racks in one program. * has a built-in effect librarian that allows to add many presets to the virtual racks. * supports the extraction of any standard audio metadata like basic metadata, ID3 tags, or MP3/WMA/AAC/AIFF tags from any standard audio files. * supports VST/AU-plugin compatibility and can be used for both Windows and Mac platforms. Hyper Shelf's low CPU usage allows using it on old computers. It is also useful in making compact compressed file sizes. RSSFM is a professional Sound Factory stand-alone program for the creation of fake vocals. With RSSFM you can create your own voiceovers and vocals, using all the characters and accents you want. RSSFM is compatible with Windows 2000 and later operating systems and does not require any Windows special settings for you to use it. RSSFM allows you to create thousands of different vocal effects for your productions. You can manage all the parameters of your voiceovers as you would manage the pitch, volume, speed, tempo, and any other parameter of a real voice. RSSFM is not limited to the vocalists you use in your recordings, you can also use different voices or voices from albums. No demo is available in RSSFM. ABX is a new line of music production software that offers you "plug-in-free" music creation for your DAWs, PIP-based music workstation, and your laptop. ABX combines a visual front end with a powerful, easy-to-use back end, with features designed to get you up and running fast. ABX features an easy to use piano roll, where
