\* Adobe Photoshop Elements: Photoshop's answer to the needs of people who don't want the intricate tools or the \$700 to \$3,000 price of Photoshop, Photoshop Elements has a collection of tools and features that will enable you to modify your images and save them on the Web. To create a layered document, Elements is an easy-to-use program that will produce transparent pixilated layers, and it allows you to do simple retouching and adjustments. It won't replace Photoshop for most people's needs, but it's an excellent alternative. Elements costs around \$40 and is available for both Mac and Windows. \* Adobe Photoshop Express: This is the mobile version of Photoshop that is available on the iPhone, iPod touch, and iPad. It's much cheaper than Photoshop (\$1.99 compared with \$4.99) and offers everything you can do in Photoshop, but you don't get the overlay system (see Figure 8-1) and the layers. In other words, it's a stripped-down version of Photoshop. \* Adobe Photoshop Lightroom: This is a very clever program that will let you edit your digital images and have them automatically organized into collections that you can play with later. It will allow you to upload your images to your computer and make basic adjustments so that they appear in their best light (with the best composition) on your iPhone or iPad. In effect, it is a great digital camera. You get a slideshow generator, sliders for the exposure and toning, and other helpings. It is available for the iPhone, iPod touch, and iPad, for both Mac and

It is chisel scratched, and the deep inlays resemble handwriting. The plate on this piece measures 16" wide by 12" high. Hand made this beautiful piece by c 18th century French artisans. On my Red Chippendale chairs, which I had refinished, I had stamped the year 1760. The name plate on the library table was also chisel scratched. In vitro, the contraction of the nuchal ligament of pithed male Wistar rats is relaxed by adenosine 3',5'-monophosphate (cAMP). The effect is specific since it is obtained when cAMP is added to the bathing medium. The nuchal ligament is composed of two layers of smooth muscle cells separated by a double layer of elastic fibres. Both layers are contracted by noradrenaline. The interstitium that separates the two layers of smooth muscle cells is composed of connective tissue, predominantly collagen fibres. The contractile response to noradrenaline of the layer of smooth muscle cells is modified by the passage of nerve endings. In vitro, the response to noradrenaline is decreased or completely blocked in the presence of nerve endings. In preparations where this effect is obtained, the contraction of the layer of smooth muscle cells is also relaxed by cAMP. Moreover, the response to noradrenaline is modified by the passage of cutaneous or subcut

Finally, one movie that makes the Alfred Hitchcock theory that clowns are a man's worst nightmare look right. You get your fears, but they're wrapped up in such a package of absurd gags and surreal imagery that you may not even be able to tell just how awful they are. All that matters is how much you want to laugh. See, here's the thing about Dawn of the Dead. You probably have seen the film on television, and maybe it made you laugh once in a while. Sometimes it even looks like a clever suspense movie that's just trying to make a few good scares. You don't really know any of the characters, and the plot is so silly that you can barely keep up with it. Yet, you're still

drawn into the movie. It's a clever concept, and sure, it may be silly, but it's kind of fun to just watch this movie in a constant state of awe. But once you've seen the second or third time, and you start to really get into the movie, you realize that it's really terrible. The acting is all awful, the special effects just look cheap, and a good half-dozen of the jokes are painfully unfunny. The funniest parts are the ones with Dawn of the Dead's constant attempts at self-awareness, as the campy horror makes jokes at itself, as well as at the Hollywood cinema of the time. So then the movie takes on a different tone, and really starts to unhinge you. When Danny and his girlfriend walk into the shopping mall, the dead are closing in on them. They get to a certain room and find it completely sealed, until one of the zombies opens the door with a skeleton key. Instead of people being packed in tightly, you see them crammed in like sardines, and then see the key bump against the wall as they look for an empty slot. Danny is sure that the skeletal key and the scene is a metaphor for his empty romantic life, but his girlfriend tells him that it's probably about the movie they're watching. What they don't know is that this is a real life, filmed more than thirty years ago. And as you can imagine, things go horribly wrong. But there's one more thing that makes Dawn of the Dead sort of interesting. The whole movie is just silly, but
