Below we collected all the resources and tutorials you need to improve your skills in Photoshop. We will take you on a journey to learn how to create everything from hand-drawn art to the most elaborate in-game portraits. In this article we will show you how to design a Photoshop logo. Designing a Photoshop Logo Step 1. When creating a new layer for a logo, make sure that the color is set to white. Step 2. Start by creating an 8px × 8px square for the center of the image. Create a new Layer and fill it with white (on the top right corner of your Photoshop you will see a little eye icon). Step 3. Add the following textures: a gradient that goes from black to white and a long brown line to give the logo dimension. Go to Filter > Artistic > Wave > Darken to create the gradient. The line will be created using the Pen Tool. Step 4. Now you will create the background for your logo. Use the Rectangular Marquee Tool and the Hand Tool to create a rectangular area with a black gradient. For a nice background use the Soft Round Brush with a black color for softening the edges. In order to create the reflection in the logo, you will create a long horizontal gradient going from white to transparent. You can do this with the Gradient Tool. For the eyes, just draw a small circle and give the eye itself a rounded rectangle and the shadow a flat color. Step 5. Add a white small shadow to the eye. Step 6. Now add a blue rectangle to the bottom center of the logo using the Rectangular Marquee Tool. Use the Pen Tool to make a shadow on the left side of the rectangle. Give the shadow color the same color as the gradient used for the eye.

Step 7. Create the inner eye by creating a white rectangle and using the Rectangular Marquee Tool to cut the outside of the rectangle. Add a black shadow to the left of the rectangle using the Pen Tool. Step 8. Select both rectangles and a group them (you can also change the name of the group by pressing the “X” on your keyboard). Go to Object > Expand Appearance to make both rectangles visible and fill the group with the color white. Step 9 05a79cecff

Zinc-catalyzed cyclization of 3-(1H-pyrazolo[3,4-c]pyridin-3-yl)-1-azabut-2-en-4-ones: concise synthesis of imidazo[1,2-a]pyridines and 2,4-dihydro-1H-imidazo[4,5-c]quinolines. A series of novel 5,6-dihydro-imidazo[1,2-a]pyridines and 2,4-dihydro-1H-imidazo[4,5-c]quinolines has been prepared by a cyclization of 3-(1H-pyrazolo[3,4-c]pyridin-3-yl)-1-azabut-2-en-4-ones to give 7-azaindole derivatives. The catalytic cyclization reaction of 3-(1H-pyrazolo[3,4-c]pyridin-3-yl)-1-azabut-2-en-4-ones can be accomplished by use of a catalytic amount of zinc chloride in solvents such as ethyl acetate, DMF, and THF. The zinc-catalyzed cyclization of 3-(1H-pyrazolo[3,4-c]pyridin-3-yl)-1-azabut-2-en-4-ones is initiated by the direct formation of zinc-complexed alkyl radicals. Graphene Oxide/Carbon Foam Composite with Large Electroactive Surface Area for Supercapacitor Application. A novel graphene oxide/carbon foam (GO/CF) composite was synthesized by in situ deposition of graphene oxide nanosheets on CFs. Due to the synergistic effects of the porous structures of CFs and the conductive networks of graphene, the as-synthesized GO/CF composite exhibits an excellent supercapacitive performance, with a high areal capacitance of 471 mF cm<sup>-2</sup> at a current density of 2 mA cm<sup>-2</sup> and a high charge/discharge rate of 10 mA cm<sup>-2</sup>. The superior electrochemical properties of the GO/CF composite have been further elucidated by characterization of its specific surface area, morphology, chemical composition, and pore structure using

### What's New In Photoshop Poster Psd Free Download?

Q: Database backup file (.bak) vs. SQL Server Log file (.ldf) I'm curious about the difference of SQL Server Log file (.ldf) and backup file (.bak). The .ldf file logs meta data of SQL Server while .bak file is the backup of SQL Server. So, my question is, which one should we use to restore SQL Server back, the .ldf or .bak file? A: A .ldf or .ldb backup file can be used to restore a database. The primary purpose of these types of file is that they act as an exact snapshot of the database at the time you make the backup. It is not intended to be recoverable - it is meant to be restored the next time that backup is made. There are 3 types of backups possible in SQL Server: Full Backups Differential Backups Log Backups For example, you may want to have a Full Backup taken every single day, and a Log Backup taken once every hour. For a Full Backup, you need a backup file (.bak), which is used to restore a database. For a Log Backup, you need a log file (.ldf) In a differential backup, the previous backup file (.bak) and the new log file (.ldf) are used to generate the backup. This type of backup can be used to recover from a crash or failure. For more information, you should check out the official guide on the topic. Q: What can I use instead of light bulbs in an electric oven? I have a regular round electric oven (not convection) and I want to replace the bulbs. I know that only halogen bulbs may be used (I am not sure, will they work with a regular electric oven?). What else can I use instead of light bulbs in an electric oven? A: Light bulbs are just a convenient technological solution to the problem of heat flux through a material. You can achieve that same purpose using almost anything. A reasonable option is a propane torch such as this one. A: Generally, if you are looking to change the appearance, you want to use something that is much more pleasing to the eye than a bulb. You can use any form of heat source, so long as it can be aimed and concentrated to a specific area. If you are
