# Humax Icord Hd Firmware Update Ber Usb BEST

Postings in this forum are provided "as is" without warranty of any kind, either express or implied. Privacy policy.Q: How to generate admin access token after user registration? I don't know what is the best and safe way to generate access token for my user that: curl -s -H "Content-type: application/x-www-form-urlencoded" -d "grant\_type=password&password=myspasswd&username=myaccount@myemail.com" -H "Authorization: Basic Zm9vOmJhcg==" Should be saved on the server. Please consider: how to generate password what is the max number of generated tokens what is the best way to generate them? A: Currently there isn't any reason to manually create an admin access token. They're used by default by the /auth/login endpoint. The database will store the encrypted password, along with an admin access token to verify the password and authenticate the user. When the user creates a request, the application checks to see if it's the first or not. If it is, the password is verified against the user's password and the token. If it is the first, the request will be created and the user will receive a request token, which is used to send requests without asking for permission again. Lastly, the /user endpoint will return the admin access token. To verify the user, you simply send the request to /api/v1/user/me and it will return a user with access token and an expiresAt date. #region License // Copyright (c) 2007 James Newton-King // // Permission is hereby granted, free of charge, to any person // obtaining a copy of this software and associated documentation // files (the "Software"), to deal in the Software without // restriction, including without limitation the rights to use, // copy, modify, merge, publish, distribute, sublicense, and/or sell // copies of the Software, and to permit persons to whom the // Software is furnished to do so, subject to the following // conditions: // // The above copyright notice and this permission notice shall be // included
