There's no auto-braking, no jumping, and no clipping. And just like in the real world, there are fast, medium and slow motion effects on-screen, giving you more control in a game that's as easy to learn as it is to play. See for yourself with a FIFA 22 demonstration video, and read on for more details. See for yourself with a FIFA 22 demonstration video, and read on for more details. FIFA 22's graphical enhancements, such as the ability to change your view from first to third person, will further add to the authenticity of the game's graphical representation.

**Innovation** The game is a mix of player development based on their first-choice system, with the use of randomisation in assigning licenses in-match. Our development team has undertaken a major effort to put more emphasis on teamwork in our player development system. We have even more player attributes, and more criteria for each attribute. Our goal is to give players more character to interact with. We will give each player the ability to take on that role. The game includes a new 'extra boost' team ability for the assist givers that will encourage players to distribute the ball as fast as they can. We have improved our AI system to create more realistic game play and improve the challenges of the game. The AI in FIFA 22 now respects the positions and behaviours of opponents and will choose a play-style to meet the opposition. We have improved the AI anticipation and decision making to make the game more unpredictable. We have changed the way we schedule the activities, games and players, so that we can give the community more content over a long term period. We have moved from purely creating numerical structures in a system, to more intuitive and accessible templates that are immediately understandable. We have used the motion capture data to add 'HyperMotion Technology' to the game. This feature takes football gameplay to another level, enabling us to make the game as easy to learn as it is to play. We

---

have also undertaken a major effort to enhance the game interface. We have redefined the Quick-start, creating more intuitive actions and added more depth to the menus. We have given players the ability to play their preferred team system.

FIFA 22 now has up to nine different user-defined systems, all of which can be swapped in-game. This means that you can
