

Note Some graphic programs—for example, Photoshop Elements—store the background in a separate layer. Photoshop doesn't. You can erase the background of a graphic either by deleting the layer or by erasing the background of the image. Figure 10-5. Here are the steps for erasing the background of a picture. To use the Background Eraser tool, click the tool icon at the left, or press Shift+Alt+E. Make sure to click the Eraser Tool icon (middle), or press Shift+Alt+E. To remove the background of a picture, choose Layer→New, select Background from the menu, and then click OK. Photoshop creates a new Background layer, and gives it the background color you specified. Figure 10-6. From there, you can do any kind of thing you want with it.") shows how to add a special effect to the new layer. In the event that you have an image that uses a transparency mask, you can use the Background Eraser to create a new background. Select either the Background layer or the image that the Background layer is based on. Choose Layer→New, select Background from the menu, and then click OK. Photoshop creates a new Background layer, and gives it a new mask—a transparent mask that defines the area of the image that appears behind it. You can use this new background with the same options as any other layer mask: white to remove the background layer, black to leave it, and gray to make it blend with the previous background.

Use of an impromptu quality assurance scheme for palliative care. In this paper we describe a new approach to assessing the quality of palliative care services in a defined area. An impromptu programme of evaluation of staff performance was established and the results compared with those achieved using a paper review of case notes completed over two months before the start of the study. The electronic review of case notes identified more patients in whom poor outcomes were being recorded. However, the incidence of inadequate staffing levels also increased by some 40% as a result of the impromptu review. East and West: a reflection on the first Western writer on Korea, Akimitsu Murakami. This paper presents the first Western writer on Korea to be identified as Akimitsu Murakami. The paper seeks to elucidate aspects of his life and work which are unknown, not yet accessible, or were previously unattainable. Murakami was a Japanese Jesuit priest and philosopher of the Edo period who crossed the Japan Sea to travel to Tae-san and returned to Japan as a missionary in his mid-thirties. In Korea he encountered a richly layered urban culture and the spiritual and intellectual life of the Joseon Dynasty. His writings offer a lens on this history and culture. Q: Kahn-Tucker condition using Lagrange multipliers If $F(x,z) = x^T z$ for $x, z \in \mathbb{R}^3$, find the critical points and describe any necessary conditions for a non-trivial minimization problem. This is my first problem using the Lagrange Multiplier. The first thing I did was find the partial derivatives and set them equal to zero which gave me that the necessary conditions are $\nabla F(x,z) = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}$ $F_x(x,z) = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} = 0$ $F_z(x,z) = \begin{pmatrix} 0 \\ 0 \\ 1 \end{pmatrix} = 0$ $F_x(x,z)^T \begin{pmatrix} 2z \\ 2z \\ 2z \end{pmatrix} = 0$ $F_z(x,z)$
