These can be opened and closed (refer to the screen below). If you don't see a Start icon at the top-right, click it. Once Photoshop is open, you will see three main tabs on the top-left side of the screen: Photoshop, Creative Cloud, and Windows. Photoshop is the main tab that you'll use to edit images. The Creative Cloud tab is the one to use for adding and sharing Photoshop add-ons such as tools, brushes, or adjustments. If you're on a Mac, the tab you'll use is Creative Cloud. On a PC, it's called Windows. At the top-right of the screen, there is a dotted line. To the right of this, you'll see the word Filters. Click on this to open the Filter menu. Many professionals still use Photoshop to edit and create finished art for web or print projects. I use Photoshop as my primary image editing software, although sometimes I use the Elements software for some low-level editing tasks. I use Photoshop for a few reasons: It is easy to get started using Photoshop, and I find it to be a great editor for graphics and photo editing. It is also not difficult to learn as compared to other advanced graphic design software. It has been around for many years and is used by many professionals, so the user community is large and extremely helpful. Most of the features and commands in Photoshop are designed for people with advanced graphic design experience. So they can be a little confusing to beginners. You can use it on just about any computer, so you can edit images on any computer you choose. How to Download Photoshop Download the latest version of Photoshop here. Q: Why does this ssh command on a Django app not pass the payload from python? I wrote a python script to generate a link which causes an SSH command to execute. It works when the command is typed into the terminal and does give an ssh output however when I run it from the django app it doesn't have the parameters. I'm not sure what I'm doing wrong. #!/usr/bin/env python # coding: utf-8 from subprocess import PIPE, STDOUT import sys # Connection to the server subprocess.call(["ssh", "-i", "~/dev/keys/id_rsa", "192.168.0.2", "-l", "sshuser", "-p", "22"]) A: The right thing to do in a Django command is: from django.core.management import execute_from_command_line execute_from_command_line(sys.argv) That will let the command set all the important environment variables. Description of Respiratory and Metabolic Changes in Physiologic High Intensity Interval Training in Two Different Assessment Protocols. In addition to increasing cardiorespiratory fitness, intense exercise is related to profound changes in body composition (e.g., greater fat-free mass and lower body fat). However, there is little information available on the effects of intense interval training (i.e., repeated high-intensity bouts in intermittent exercise) on respiratory and metabolic function. Therefore, the aim of this study was to investigate the effects of a 5-week high-intensity interval exercise program (3 weeks of 10% maximum workload, followed by 2 weeks of 70% maximum workload) on respiratory and metabolic functions. Twenty-two trained men (29.1 ± 4.9 years, 176.9 ± 7.8 cm, 84.3 ± 9.8 kg) took part in this study. Cardiorespiratory and respiratory parameters (i.e., maximum oxygen uptake, respiratory rates, minute ventilation, tidal volume, oxygen consumption, and carbon dioxide output) as well as metabolic parameters (i.e., heart rate, blood lactate, and blood glucose) were evaluated prior to and after a 5-week interval training program (10 repetitions of high-intensity bouts interspersed with active recovery periods of 2-4 min) on a cycle ergometer.
