How to use: If you like this widget, please rate it. Thanks for using this widget. ==Link== The HTML5 App Installer for Android now has a new API called WebStoreInstaller, which lets an app be distributed to users on other platforms like iOS and Windows 8. WebStoreInstaller works by including a tag in your app that links to an HTML5 manifest. The manifest is a text file that contains information about the app and its capabilities (and will be automatically generated by Google Play). Below is an example manifest, taken from a Google Play app that includes WebStoreInstaller. While WebStoreInstaller is good news for developers, it doesn't directly support more complex distribution scenarios, like ones where a user can't install the app right away, but must come back later. That's where the PackageInstaller API comes in, which enables users to install an app directly from the Web without being prompted to download an APK. WebStoreInstaller is currently available in the Google Play API reference, but only for development use. It's still under consideration for future release, so if you're interested you should check back with the Web Store Installer documentation regularly. ==Link== Typing quizzes are a fun way of testing your knowledge, but they are also a good way

What's New In Memorize Numbers?
