## SpectrasonicsOmnisphere2DVDRD1D8R2RDYNAMiCSSerialKey

A: Rename your 'reloadData' method to 'reloadDataAgain' and add only this line: [self.tableView reloadData]; And the data will be reloaded on the next screen update. If you need to only reload the data based on the selected row, you might have to add more code. To select a particular row and reload only it, check the selected index of the row, then reload that one particular row. Q: Using select, how to avoid overwriting the list I want to select data from 2 table but the issue is that the data are overwriting each other so that when i try to retrieve the data, it shows error here is the code Select "> Select
