How to turn off Master/Slave relation in MySQL? I have 2 question in MySQL. My first one is I have a master table and some hundred of other tables that are need to access to the master table. I believe that in the past I used Master/Slave option to access to the table. But I can not find the master/slave option in MySQL. And I can not find a way to change the master/slave option. How should I change the master/slave relation? My second question is that what if I want to turn on/off master/slave option in the past? Now my master table has gone down and all the slave tables need to access the master table. Thanks, A: From The MIXED and ROUTE types of replication. For example, the MIXED type replicates data from a master to one or more slaves by having the slaves append their data to the data on the master. The ROUTE type replicates data from one slave to another slave. With the MIXED type, the slaves operate as additional masters; with the ROUTE type, the slaves replace the original master. You can use the REPLICA option in addition to MIXED or ROUTE to distribute the load among the slaves. You can also use the REPLICA option on slaves to make them read from other servers. 1. The .Q: Concept of Ordering Variants of Independent Events I am studying the book of Probability by Sheldon Ross, and on page \$71\$ he gives a definition of \$G1.3\$. I am not getting the concept of ordering variants of independent events. I have the following questions: What would be the relationship between \$G1.3\$ and the definition on page \$70\$ of this book? What I understand that is \$\{A, B\}\$ is given, then should I take \$\{\text{all } A^{\prime}\in A\text{ such that } B\in A^{\prime}\text{ such that } B^{\prime}\in B\text{ such that } A\in

$B^{\{\prime\}}$  A: The relationship between (1.3) and (1.1) is simply that (1.3) formulates a slightly more general definition. The relationship between (1.3) and G2 is simply that G1.3 can be deduced from G2 by taking the "set" on the left side to be a set of two elements, rather than one element, and the "symmetry" condition becomes vacuous. The relationship between (1.3) and G3 is, in my view, that (1.3) generalizes G3 by adding the restriction that G3 requires that the sets be disjoint. The form of the second condition is merely an

She is all for it, but when she gets to see the attached switch, she freaks out and lets the man go. I think that the woman in this story is a sadist (or masochist, I'm not sure which). Not only does she let this man have sex with her, she agrees to let him have sex with her. This is a woman who likes to torture. While having sex with her, she shows him the switch that is attached to his penis. He can either work the switch while having sex with her, or have sex with her without it. Either way, she has the power to control him. What should he do? He could say that he's gonna work the switch while having sex with her, and then say to her as he opens the switch that he won't work it anymore as long as she's happy. Or he could say that he's gonna have sex with her, and then when she's down there, he stops. He could say that he's gonna have sex with her, but when she's down there, he freaks out and says that she accidentally took a pill that kills her (even though he already said that she won't die). Or he could say that he's gonna work the switch but then, while she's down there, he doesn't work it anymore, and she can't decide if she wants to commit suicide or live. One thing is sure, no matter what he says he will not be unfaithful to the woman, and I find that important. If he is unfaithful, then he needs to be on this page. I think that the

woman in this story would blame herself if the guy was unfaithful. Would you allow someone to work a switch while you are having sex with them? If the answer is yes, then why are you hesitating to have sex with the man if the man already told you he won't work the switch any more?
