A common type of housing in which gas-fired water heaters are installed is the so-called zero clearance "double wye" design. The double wye design includes two separator systems arranged in a bifurcated fashion. Each separator system extends from a central conduit and includes an equal number of branch conduits each leading toward a combustion chamber for housing a hot-gas fueled burner. The branch conduits are connected to the central conduit at

a common point where the central conduit branches off each of the branch conduits. In the past, separator systems have been assembled in two piece units which require a degree of skill in assembly. One separator system used in the past included four separator sections, each separator section having one branch conduit extending therefrom. The four sections were then slid onto a central section until the central section was completely surrounded by the four sections. This method of assembling the separator

system produced a relatively rigid assembly structure, which was susceptible of damage during installation. In accordance with the present invention, there is provided a separator section having an improved joint construction which eliminates the requirement for manual assembly and which also provides a reliable, strong, and durable separator section which is both economical to make and install.Q: This null check is too broad, but I can't narrow it down I have some null checking that is too broad, but I can't

Effects of cisplatin and nicotinamide on chick embryos with normal or defective nephrons. Cisplatin is an anticancer drug which damages DNA and causes

cell death. We have recently shown that the developing kidney is sensitive to cisplatin. Although various nephrotoxic agents have been found to damage renal tubules of the immature chick, we have not found any previous report that has indicated that cisplatin has any nephrotoxic effects in the chick embryo. This paper shows that both cisplatin and nicotinamide have nephrotoxic effects in the chick embryo. Cisplatin is more nephrotoxic than nicotinamide. The difference in the effect of the two drugs is related to the

difference in their chelating effects. The regenerative capacity of the developing kidney is not affected by the nephrotoxic agents studied.Adinathipuram Adinathipuram is a town in the District of Nilgiri, Tamil Nadu, India.
