accept the key file from youQ: Fluent NHibernate "The UPDATE statement conflicted with the FOREIGN KEY constraint" I am getting an error when updating a table (this is in a loop) with Fluent NHibernate "The UPDATE statement conflicted with the FOREIGN KEY constraint "FK\_dbo.Group\_dbo.UserGroup\_GroupId"" I think the problem is that there are several foreign keys to the same table

```
public void
UpdateOrCreateGroup(GroupModel gm) { using (ISession session =
_context.OpenSession()) { using (ITransaction transaction =
session.BeginTransaction()) { // Group exists if
(Group.Exists(gm.GroupId)) { // update Group.Update(gm); // Commit
transaction b7e8fdf5c8
```

## **What's New In BelugaFile?**

BelugaFile is free software made by Beluga Soft. This is a unique thing about BelugaFile, it's made by the makers of the famous FreeFileSync. So if you have used free version of FreeFileSync before, your mind will probably tell you that this is a tweaked version of that program. That is wrong. This is actually a separate program. In fact, the makers of FreeFileSync claim not to know much about BelugaFile. BelugaSoft claim that BelugaFile was created by another developer. If this is the case, that developer is probably working for BelugaSoft. So even if you like FreeFileSync (I know that some of us like it, and I am one of them), you should try BelugaFile too. I've used BelugaFile to share 3.14.12 version of FreeFileSync with my cousin, and we both enjoy it, so I can tell you that it works. Major features: \* Compatible with FTP and SFTP servers \* Supports

---

unlimited number of files \* User-friendly, not a hard-core automation program (I have tested it) \* Works in both 32-bit and 64-bit versions of Windows, freely available as 32-bit or 64-bit executable for the same price, by double-clicking the executable file \* No installation required \* No configuration required \* No special set up required before connecting with your peer; once connected, both of you will have access to each others' folders without any extra configuration. \* Automatically converts all text files between Windows and UNIX file formats (LF/CR - CRLF/LF, UTF-8/UTF-16, BOM/Byte Order Mark, etc) \* Mounts a virtual local drive to the network share that contains all the files needed by the user \* Send folders with sub-directories and files in it with the ability to exclude some files/folders on the destination side \* Easily disable some files/folders on the destination side without disabling the rest of the sharing \* Works with a remote computer, without remote desktop \* Fully compatible with Windows/OSX file managers, no need to change anything. \* Built-in support for FREE online storage (Dropbox) (included with every installation) \* Supports the UPnP port opening protocol in case your network shares are protected by a firewall. \* Supports SFTP, FTP, and HTTPS connections

---
