When I finally got my own TX, I pulled the trigger on the phone-based controls. But I found it the controls were finicky, and there was a learning curve for understanding how to use them. I downloaded RFG3. I searched and found a forum on the R/CControl forum with a video of someone taking off and flying in RFG3 on a TX. It was my choice to fly in RFG3, the TX, or FMS. As I had flown in RFG3 before, I chose that. I saw the video of his flight, it looked easy, and I downloaded it. Since it is the only application out there that let's you use the phone-based controls with the Interlink, it was the only one I used. In my experience of flying, I found the control system very similar to RFG3, only better. If you have been following RFG3, then you know that it was once called OpenRFG3, and I'm pretty sure that the original developer, Tim H, was really interested in open-source flight sims. He recently came out with a project called P3D, and announced that he was going to start on OpenRFG3 2.0. Since I knew about it, I wanted to try it. I downloaded P3D, and I installed OpenRFG3 on my computer. I was told on OpenRFG3 forum to download CFM from <http://www.cp2k.org/> "Download CFM for OSX." I downloaded the mac version, and installed the usb driver in OpenRFG3. It didn't work, so I learned to get it to work. This was the most frustrating process I have had in my 10 years of playing with RFG3. I know that people on the open-source forum told me it was working, but it still didn't work, and OpenRFG3 didn't tell me what was going on. I then read that if you installed the emulator, you would need to install CFM, so I started to look on a different forum for help, and I downloaded the last CFM for Windows, and installed it. CFM installed fine, and it worked for a few minutes before it crashed, again. I then found the forums for the P3D project, and found that Tim was going to start on RFG3 2.0 on the P3D forums. Tim's emulator is included in RFG3 2.0, so I downloaded the RFG3 2.0 installer, and installed it. At this point, I still hadn't been successful, since I had not managed to get CFM installed and working correctly. But I hadn't given up. I downloaded OpenRFG3 to my computer, and I installed the P3D version of OpenRFG3.
