this article addresses the problem of avoiding the trap of 'premature' adoption of digital solutions, which overlooks the disruptive, and sometimes even disruptive, effects of these solutions. it explains the concept of disruptive innovation and, in particular, the different stages of disruptive innovation through which digital solutions can enter the market. it then provides a rationale for the need for digital-savvy risk-averse organisations in the early adoption of disruptive technologies. a healthy economy always draws to it a number of parallel entities who may be cooperative, competitive, or exploitative, and there are any number of methods which may be used to reconcile their interests. in the traditional format, cooperation is by far the simplest way for business people to get along. people mutually benefit from each other's participation, and they are compensated either by the fulfilment of their needs in the combination, or by the payment of money. this paper examines the common use of detection as part of the verification process. the most widely accepted uses are normally "prevention" and "identification" (or detection). detection of suspicious activity is the most commonly used pre-security tool for security problems, whereas it is commonly used for identification (the opposite of prevention) on os or product recovery. the paper provides an historical overview of the development and impact of cultural psychology (the concept and approaches of cultural psychology) and explores the influences on cultural psychology from its two main traditions within american psychology-as observed within psychology's institutionalization within america's universities, thus providing a research basis for the future of cultural psychology.

methods: we conducted secondary data analysis of the randomized controlled trial (rct) of the center for medical and population health improvement, center for tobacco products, food and drug administration. from the total of 1,213 adult smokers participating in the trial, only 2.6% were provided information on a new fda-approved medication (varenicline). results: results show significant differences between primary care and specialty settings. smokers recruited from the primary care setting are significantly more accepting of the new medication than those recruited from specialty settings, even after controlling for differences in demographics and background characteristics. similarly, participants who received 3 counseling sessions had a higher acceptance rate of the new medication relative to those who received 1 or 2 counseling sessions. we plan to experimentally test the fit of the economy and ecology models by measuring a diverse set of indicators capturing the extent of interactions between natural ecosystems and human society. drawing lessons from experience and research studies, we will also describe the potential trade-offs between the two models and the ways in which they are or cannot be reconciled. as noted by kriege (1982, 1987), when public authorities extend the scope of their power, the economy of the state is modified by the power to direct the allocation of private capital. the degree to which this occurs can be seen in the ability of the state to acquire assets and in the changes in how public assets are managed. at the same time, the economy is affected by the state's decisions to take over assets. by purchasing these assets, the state may have a social gain in the form of improved service to the public, which can be seen as another form of ownership, but it is also made possible by a decrease in a private interest. such a "commensal" profit of the state can have important consequences for how the state exercises its powers. 5ec8ef588b
