Architecture Vision What is ai built for? Imagine a perfect world where everyone is a designer. Imagine the ability to pick up a piece of paper that is an outline of your exact project and then turn the page in a matter of seconds to see a professional, high quality document outlining your entire project. Now imagine if you could do all this in the cloud, from an entirely new mobile device. That's A-I. How does it work? A-I produces quick and precise technical drawings for 3D CAD, CNC machining, hydro and thermal analysis, mechanical engineering, electrical engineering, mechanical engineering, civil engineering, mechanical engineering and environmental systems. It is a user friendly, cloud based, integrated tool that will enable you to achieve your maximum potential as a designer and producer. It can do this by combining multiple tools into one cohesive package. What kind of project can I design with A-I? In one word, all types of project. A-I can create anything from the simplest 2D design, to complex 3D models of full scale buildings and even massive 3D orthographic/perspective/topographic maps and sections of the earth. Use Cases In the next few examples, we will break down how A-I has been used to create detailed 3D graphics and check-outs, create detailed drawings and check-outs from geometry software packages and even create detailed 3D models from CAD files. 5ec8ef588b
