and now, after a long period of absence, nuendo is finally returning to its roots as a post-production application. a short period of neglect at steinbergs hands has given the nuendo team the chance to introduce some much needed and long overdue enhancements. nuendo 3 uses a large number of new features and improvements that will appeal to both the small and large screen users. its still a powerful and professional grade daw, but its now much more user friendly and much easier to work with. its also given us the ability to make nuendo 3 as powerful as we can, without the need to introduce features that will likely never reach the level of nuendo 2 or cubase sx. its like were in the process of making nuendo 3 from scratch, rather than replacing one version with another. key to this is the nuendo 3 user guide. its a large booklet that provides an introduction to nuendo and its features, with all the controls and menus as a large colour map. alongside the user guide, nuendo 3 comes with a good selection of project templates and daw templates to get you started on your first project. the templates include both midi and audio tracks, and the audio tracks can be exported as.wav or.aiff files, or imported from a.aiff file. the export options include wav packet, wave packet, and aif packet. the daw templates also include a standard nuendo setup, with a plain blank project and a standard drum kit, as well as a set of standard midi tracks. the drum kit is provided with a good selection of percussion instruments and a good selection of midi parts. the templates also include a selection of over 100 loops, many of which can be used as instruments in a track, and the loops can be exported as.wav or.aiff files.

in the short term, nuendo 5 will be released in 64 bit format only on mac os x 10.6 and above, with support for mac os x 10.5 and mac os x 10.4. so, if you have a mac with 10.6 or higher, or a mac with 10.5 or 10.4, youll be able to use nuendo 5, and nuendo 4 will be a 64 bit version only on 64 bit windows, as it has been for the past few years. theres a few things that this may affect, but probably not for the worse. firstly, nuendo users will have a 64 bit version of nuendo 4, and hence will be able to use 64 bit windows for playback of their nuendo 4 projects. this will be the same as nuendo 3 users, although they will now be able to do so on 64 bit windows. secondly, nuendo 5 will be released in 64 bit format only on mac os x 10.6 and above, but as this is the same for nuendo 4, then nuendo 4 will be available in 64 bit format on mac os x 10.6 and above, and mac os x 10. as for the interface, it remains largely unchanged, although the new driver now uses a new skin that is more consistent with nuendo and cubase. the navigation panel has some minor changes, particularly on the right-hand side of the window, and some minor changes to the properties panels, although in all fairness theyve been completely redesigned in some areas of the interface. theres also an embedded browser in the project window, which is a great way to check out the content of different types of files without the use of the file browser. the nuendo 3 control panel is much better organized and has a number of new features, including a new project dialog, a folder view that lets you navigate to subfolders by highlighting folders on the left of the project window and a view/tools window that lets you browse through the project window as you would through a browser, with the ability to select which regions or tracks to preview, or to see a view of the selected region or track.

you can also open a region or project in a new browser window and use the navigation and preview facilities in that window. you can also use the new navigate/navigation view to preview an audio region or project in real time, or to select a region or project for preview. 5ec8ef588b
